Education

UIET Panjab University

Bachelor of Engineering in Information Technology | CGPA: 9.6

2024–2028

Chandigarh

Cambridge Academy

Class 12th | Percentage: 92%

2022–2023

Rajsamand

Technical Skills & Qualifications

Languages: Python, C++, JavaScript, SQL

Web & Frameworks: HTML, CSS, React.js, Node.js, Express.js

Developer Tools: Git, GitHub, VS Code

Machine Learning & AI: Machine Learning, Deep Learning, NLP (Beginner), NumPy, Pandas, Scikit-learn, Matplotlib, Model Training & Evaluation, Hyperparameter Tuning

Relevant Coursework

DSA • OOPs • DBMS • OS • CN

Experience

Learning Zone

Jan 2026 – Mar 2026

- Developed a web-based management system to automate tracking of student fees, dues, and payment histories.
- Designed and implemented secure authentication and role-based dashboards for admins and staff.
- Created a MySQL database to maintain student profiles, payment details, and attendance logs.
- Integrated data visualization dashboards for monthly fee reports and overdue tracking.

Projects

DevConnect – AI-Powered Full-Stack Career Platform | *React.js, TypeScript, SQL, Supabase, Gemini API* Jan 2026

- Problem:** Job platforms lack personalization and tools for both candidates and freelancers.
- Solution:** Built a unified platform with user profiles, recruiter dashboard, and job/freelance marketplace.
- Features:** Integrated AI tools for resume generation, ATS score analysis, and skill extraction from certificates/projects.
- Impact:** Improved candidate-job matching and streamlined hiring workflows with AI assistance.

AI-Based Prescription Reader | *Python, Flask, OpenCV, TensorFlow, OCR*

Oct 2025

- Problem:** Handwritten prescriptions are difficult to interpret and prone to errors.
- Solution:** Developed a trained AI model to recognize doctor handwriting and extract medical information.
- How it works:** Uses image processing + ML model to identify medicines, dosages, and recommended tests.
- Impact:** Helps digitize prescriptions and improves clarity for patients and pharmacies.

AI Multi-Modal Attendance System | *Python, Flask, OpenCV, Face Recognition API, Geolocation API*

May 2025

- Problem:** Traditional attendance systems allow proxy and lack real-time verification.
- Solution:** Built a multi-modal system using face recognition and location verification.
- How it works:** Captures biometric data and validates identity with location checks via backend APIs.
- Impact:** Prevents proxy attendance and ensures secure, reliable tracking.

Co-Curricular Activities

- Hackathon Winner – Technovate 3.0 (2026):** Won first place competing against teams to deliver an innovative technical solution under time constraints.
- Smart India Hackathon (SIH) Participant (2024–2025):** Participated in the national-level hackathon for two consecutive years, collaborating on innovative solutions to real-world problems.
- Freelance Developer (Ongoing):** Delivered multiple web-based projects for clients, gaining real-world experience in requirements gathering, development, and deployment.
